Installation

Step 1: Remove the four (4) cover plate screws and the cover plate from the EN6001 timer module (PN 600772). Note: The timer should be completely disconnected from any control and/or power source.

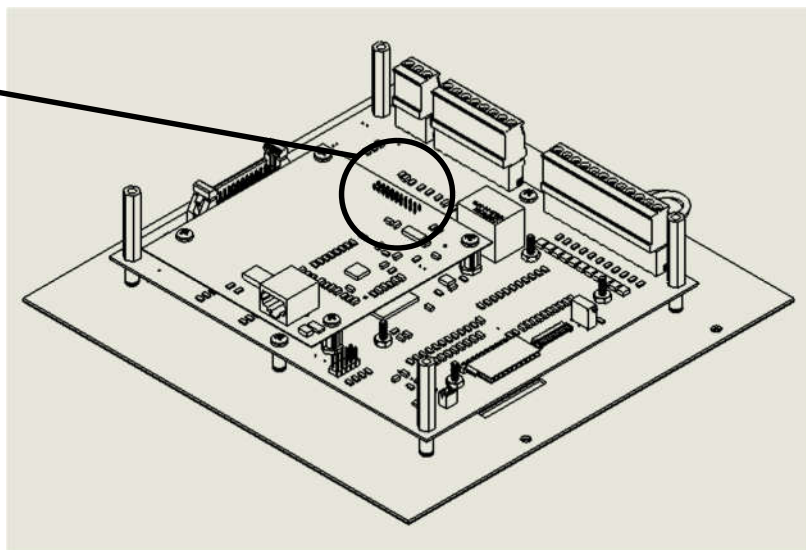

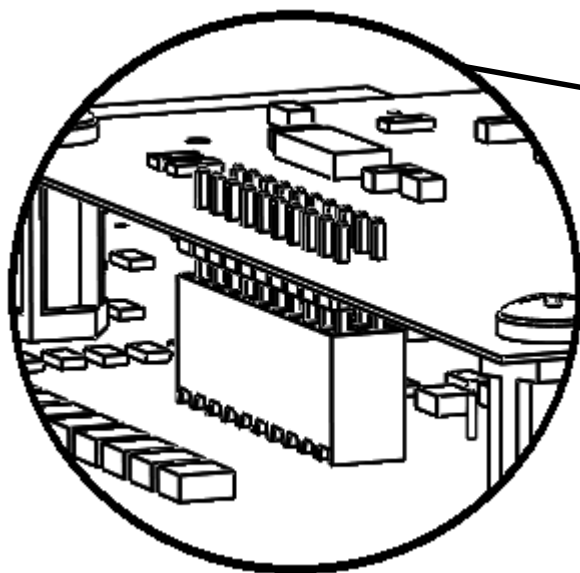

Step 2: Place the nylon standoffs (PN 555053) into the four (4) mounting holes in the timer board.

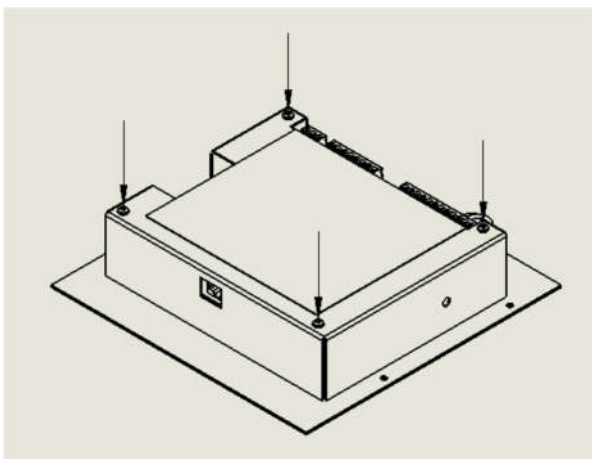

Installation

Step 3: Mount the communication board (PN 410392) onto the standoffs with the ethernet connector facing outward as shown. **Ensure careful fitting of the J-Tag on the underside of the board.**

Step 4: Replace the cover plate and screws

For data transfer information and communication usage, please refer to document 700231 and the ENLink Software User Guide.
